March/April 2024

The US-UK Nuclear Weapons Agreement

The Mutual Defence Agreement (MDA) oversees the transfer of nuclear technologies that enable Britain to maintain and modernise its nuclear arsenal. It has been in place since 1958 and is renewed every ten years and underpins the US/UK “special relationship”. It is shrouded in secrecy and lacks any kind of transparency.

Many are asking what the possible return of Donald Trump to the White House would mean for nuclear tensions in 2024 - higher now than they were when he left office four years ago.

In a year when there will be a UK General Election, the MDA is up for extension - but there will be no parliamentary oversight or scrutiny even though it is essential for the renewal of the Trident nuclear weapons system.

It's important that a spotlight is shone on this secretive relationship which is why CND and Declassified UK held a joint webinar on this topic in February. The recording of the webinar is available on Youtube here: <http://tinyurl.com/y2jbbwtj>

The guest speakers are Richard Norton-Taylor (Declassified UK and former longtime security and defence editor of The Guardian); Baroness Natalie Bennett (Green House of Lords member); and Mark Curtis (Declassified UK), with Kate Hudson in the chair.

BITS FROM ABROAD

Iran has enough uranium to make 12 nuclear bombs in five months, warns former UN weapons inspector.

The revelation follows the disclosure by the International Atomic Energy Authority (IAEA) that the Iranian regime has increased the production rate of highly enriched uranium up to 60 per cent purity. Modern nuclear weapons require uranium to be enriched up to 90 per cent but inspectors within the IAEA believed this could be achieved by Iran very quickly. Now David Albright, a former UN weapons inspector in Iraq, believes that Iran could begin producing weapons-grade uranium in a matter of weeks and already has the technical knowledge to build nuclear weapons.

In an alarming development, Ali-Akbar Salehi, the former head of **Iran's** nuclear agency has implied in remarks broadcast on Monday that Iran has everything it needs for an A-bomb. In a televised interview, Salehi, who was also foreign minister (2010-2013), was asked if Iran has achieved the capability of developing a nuclear bomb. Avoiding a direct answer he stated, "We have [crossed] all the thresholds of nuclear science and technology. Here's an example: Imagine what a car needs; it needs a chassis, an engine, a steering wheel, a gearbox. You're asking if we've made the gearbox, I say yes. Have we made the engine? Yes, but each one serves its own purpose," the senior regime insider said.

The head of the largest western supplier of enriched uranium used to fuel nuclear plants in the **US** says it has enough capacity to replace Russian supplies if Washington bans imports from the country. Boris Schucht, chief executive of Urenco, said a US bill proposing to ban uranium imports from Russia would boost a multibillion-dollar effort by western nations to strengthen their nuclear supply chains by providing long-term certainty to market participants.

FROM THE MEDIA

Nuclear strike (not THAT kind): Workers at Atomic Weapons Establishment where Trident missiles are maintained stage 24-hour walkout amid row over pay.

Daily Mail 24th Jan 2024

<http://tinyurl.com/he7dsjzw>

BASING US nuclear weapons in Britain will make the country a "guaranteed target" in the event of nuclear war, the Campaign for Nuclear Disarmament (CND) has warned. And the plan is likely to have provoked Russia's decision to base its own nuclear weapons in Belarus. CND cited mounting evidence that the British government and the US have agreed to redeploy US missiles in Britain, including documentary evidence.

Listed companies find ever more innovative ways to engineer a crash in their own share price. In the case of Babcock International, last week, the trigger was to hold a "capital markets day". Before the event at the Royal Naval Dockyard in Devonport, which attracted an audience of 100 analysts and investors, Babcock promised to impart no new market-moving financial information. David Lockwood, the chief executive, had barely finished his presentation on what Babcock was up to — and specifically at the warship and submarine refit and refurbishment facilities that it owns and operates at the historic Plymouth facility — when the shares started falling.

TRIDENT AND RELATED NEWS

Trident missile test failure raises questions about UK's nuclear deterrent.

A Trident nuclear missile failed, plopping into the Atlantic during a test launch attended by the defence secretary last month, raising questions about the efficiency and effectiveness of Britain's nuclear deterrent. The Ministry of Defence said that an "anomaly occurred" during the exercise involving the submarine HMS Vanguard on 30 January that was "event specific", implying it would not have happened in the unlikely event of a war.

FAILING to address acute concerns about the state of Trident nuclear submarines is putting Scottish lives "at risk" and shows Westminster's "blatant disregard for Scotland", an MP has said. Martin Docherty-Hughes issued the warning ahead of a debate in Parliament today, in which he will attempt to get answers from the UK Government over serious concerns raised by a top insider about Britain's nuclear weapons. The SNP defence spokesperson will lead an adjournment debate on Wednesday evening to highlight bombshell comments from former top government adviser Dominic Cummings. Cummings sparked concerns about Trident when he claimed to have sought assurances from Prime Minister Rishi Sunak that he would deal with the "scandal" of nuclear weapons infrastructure which he described as a "dangerous disaster and a budget nightmare of hard-to-believe and highly classified proportions".

NUCLEAR POWER

The Stop Hinkley Campaign has reacted to the news that the cost of Hinkley Point C has ballooned to £46bn and that the first reactor may not now be open until 2031. Stop Hinkley Spokesperson Roy Pumfrey said: "The Government will have known for days if not weeks that this announcement was coming – we certainly heard rumours. You would have thought it would have provoked them into at least re-examining their nuclear roadmap. Instead, on Monday they decided to waste another £1.3bn of taxpayers' money on a carbon copy of Hinkley Point C on the Suffolk Coast. Any sensible Government would be urgently looking at the overwhelming case to provide our power from 100% renewables."
