US Weapons confirmed in Space

Confirming what many peace campaigners have suspected for a long time, it has now been revealed that the US has deployed weapons in space.

While the US has been exploring anti-satellite (ASAT) systems since the Soviet Union launched Sputnik in 1957, US Secretary of the Air Force Troy Meink disclosed last month that these could be kinetic (hit to kill projectiles) or non-kinetic (including laser, electronic warfare and signal jamming weapons). The truth is we don't know what type of weapons there are in space, how many there are, or how long they have been there.

Meanwhile, the UK Defence Journal reported on 29th September:
Orbital weapons of both kinds pose a growing threat to the space-based services Britain and its allies depend on, and any attempt to put nuclear weapons in orbit would be highly destabilising and contrary to international law, the Ministry of Defence stated in a written answer. Lord Coaker, Minister of State at the department, was answering Baroness Bennett of Manor Castle, the Green Party peer, who asked what assessment the government had made of the danger of orbital weapons, kinetic and otherwise, following what she described as the disclosure by the United States of its aggressive space capacity, and what steps ministers plan to take to prevent a new arms race in space.

BITS FROM ABROAD

Senators Jeff Merkley (D-Ore.) and Ed Markey (D-Mass.) introduced a measure on Thursday that would block President Trump's deal to allow **Saudi Arabia** to build a civilian nuclear program. The Democrats' measure is a joint resolution of disapproval, a legislative tool that requires a vote after Nov. 29. The senators expressed concern that the deal gives Saudi Arabia access to U.S. technology for civilian nuclear energy but does not contain sufficient guardrails against Riyadh using that tech to create nuclear weapons.

China recently significantly expanded its uranium enrichment capacity. The predominant view of experts and respected non-governmental organizations is that this expansion is needed to supply China's growing civilian nuclear energy sector. … Dr. Hui Zhang, Senior Research Associate at Harvard's Belfer Center, suggests otherwise. China's enrichment capacity, he notes, already is nearly 50% greater than domestic civilian demand. He projects this surplus will climb over the next decade. He also notes that China cannot get to 1,000 nuclear weapons without more highly enriched uranium and estimates that its current uranium enrichment capacity could fuel both its domestic civilian demand and several thousand thermonuclear weapon secondaries.

FROM THE MEDIA

Britain is dangerously exposed in the High North to Kremlin spy ships and espionage as tension mounts between the UK and Russia, MPs are warned. 'Glaring gaps' in the UK's military strength in the High North could leave Brits, our nuclear deterrent and crucial subsea pipelines vulnerable to Russian attacks, MPs have warned.

North Korea will keep its nuclear weapons "forever", its foreign minister vowed Thursday, dismissing the South Korean president's renewed calls for a denuclearised Korean Peninsula. Pyongyang has legally enshrined its status as a nuclear-armed state, with its leadership repeatedly declaring the country's atomic arsenal permanent and irreversible.

Revealed: Xi's nuclear weapons expansion at seven secret sites. The Chinese president has repeatedly said nations should destroy their stockpiles. China is rapidly expanding its nuclear weapons programme across at least seven major sites despite calling for non-proliferation, a Telegraph investigation has found. Satellite image analysis has uncovered significant construction at nuclear facilities and testing areas across the country. At one site, where China is believed to produce the plutonium triggers designed to activate nuclear weapons, an entire support town has been built, with new apartment blocks, an athletics field, and a bus depot used to transport staff to and from the nuclear site. At another, a 600m-long tube has been built. Experts say it is used to test how nuclear weapons would withstand blasts – for instance, from enemy weapons.

As the SNP meet for their annual conference, there can be little doubt the British government sees Scotland as a key frontier in its plans to militarise the nation. Scotland already faces the world with an Anglo-American nuclear weapons system based on the Clyde, so whose interests are served by going further in turning our country into a bunker-state and launchpad for war? … £15 billion (14 times Scotland's annual housing budget) to upgrade Faslane in preparation for a new generation of nuclear weapons; construction of bomb shelters at the base and new docks so it can host more British, US and French nuclear submarines. Plans to build a new munitions factory at Mossmorran where a civilian industry will soon be closed; the return of the US Air Force (USAF) to Lossiemouth for the first time since the Cold War.

The Ministry of Defence is being urged to "come clean" about an accident that reportedly destroyed the UK's emergency nuclear war communications balloon… Byline Times reported that the helium balloon, codenamed Sunflower and kept in Scotland, crashed to the ground after deflating during a test over Yorkshire on 4 September. The balloon is designed to lift a 1,500-metre radio antenna enabling the UK government to order Trident submarines to launch a nuclear strike after Britain has been attacked. Both the Ministry of Defence (MoD) and the army have refused to make any comment at all, encouraging speculation that the balloon could have been downed by a Russian drone. At the same time, one of the main pieces of evidence about the balloon's history and purpose appears to have been removed from a military website after it was highlighted in Byline Times.

What's On

November/December 2026

The next **Mailing** is due to be sent out at the beginning of January 2027

The next meeting will be our AGM on zoom. on Tuesday 10th November at 7.30pm
The existing officers have agreed to stand again but other nominations are welcome.
Existing officers are Eric Harley -Chair
Gill Cox -Treasurer
Pam Bishop -Website controller
Patrick Hare Minutes Secretary.
The AGM itself will be fairly brief but will be followed by our usual planning meeting.
All are very welcome to attend but note that to vote you need to be a member of national CND. Please e-mail wmcndall@gmail.com for the zoom link.

Obituary

We were sorry to hear of the death of Brian Rands, a week after a party to celebrate his 100th birthday.

Brian was an early member of Hereford Peace Council and an active, much respected and liked participant in its activities for many years. Not only was he a conscientious and excellent treasurer of the group, but he produced a wonderful edifice on which we could put our posters when we had a stall in High Town in Hereford. In the eighties, he was part of a West Midlands CND delegation to Minsk.

His was a long and productive life. May there be many others like Brian

Britain is deepening its nuclear relationships with the United States, France and Australia, with the Northwood Declaration recognising that there is no extreme threat to Europe which would not prompt a response by both Britain and France, according to the annual update to Parliament published this week. The declaration reaffirmed and strengthened what the update describes as longstanding nuclear cooperation between the two countries. On the AUKUS partnership, the update records an important development in February this year when HMS Anson docked at HMAS Stirling near Perth. The United States is described as Britain's closest defence ally, with the relationship underpinned by long-standing cooperation on all nuclear matters including policy, operations and technology.

When AI researcher Jacob Coxon announced his resignation from Anthropic this month, he warned that people at companies racing toward self-improving superintelligence "earnestly believe that it could kill us all by the end of the decade." … Although super-intelligence is not precisely defined, AI developers agree it is not yet here. But today's AI systems can cause nuclear war even if people nominally remain in charge. AI need not launch a weapon, recommend a strike, or intend harm. Ordinary human may be enough to lead to catastrophe. AI can shape the information reaching leaders, whose minds are already struggling to comprehend the con-sequences of nuclear war. AI can exploit known vulnerabilities of human judgment compounded by false, misleading, or out-of-context machine outputs and amplified by the speed, scale, and volume of AI-generated information. Even accurate information can be interpreted improperly or unwisely when presented without proper context; errors and ambiguities introduced by AI can make matters worse.
